

Comprehensive Protection Against Online Fraud

What is Trusteer Rapport?

Rapport is lightweight security software that protects your online banking communication from being stolen by criminals. Trusteer Rapport is highly recommended by your bank as an additional layer of security to any anti-virus or security software you already use. By protecting your internet connection and creating a tunnel for safe communication with your bank's online website, Rapport blocks malicious attempts to steal money from your account.

What's at Stake?

The top two fraud threats identified by the FDIC are malware and phishing attacks. In April 2011, The FBI identified twenty incidents of attempted fraud totaling \$20 million wherein online banking credentials of small to medium sized US business were compromised and used to initiate wire transfers to Chinese economic and trade companies.

Corporate bank accounts are sensitive targets and are increasingly being attacked by fraudsters. One of the biggest risks is actually the computer used to bank with. Criminals use two sophisticated attacks to access online accounts using your computer.

Malicious software (or malware) - automatically and silently downloaded onto the computer when browsing the Internet, malware silently captures login information and transfers it to criminals as log-in is performed

and can also silently change transactions executed.

Phishing - criminals build fake websites that look very similar to your bank's website to lure you into visiting them and submitting your online banking log-in information which is later used to access your account.

Trusteer Rapport - Dedicated Online Banking Security

Trusteer Rapport adds real value on top of your current security software. When you login, Rapport does 3 things in the background that prevent criminals from targeting you:

1. Rapport verifies the connection to your bank's genuine website as opposed to a fake website created by criminals. Although this sounds trivial, it's not obvious that you reach a genuine website when you type your bank's address into your web browser
2. Once verification is complete, Rapport locks down communication between your computer and your bank's website. This prevents criminals from hijacking the online connection with the bank
3. Rapport protects your computer and internet connection by creating a tunnel for safe communication with your bank, preventing criminals from using malware to steal log-in data and tamper with transactions

Comprehensive Protection Against Online Fraud

Different from Anti-Virus & Firewalls

Anti-Virus solutions take days, sometime even weeks, to detect new financial malware variants and remove them. However, fraud occurs hours after a new malware variant is released. So when your anti-virus provider eventually cleans your computer of the malware, it is already too late to prevent fraud from occurring.

Trusteer Rapport protects your computer and mitigates financial malware infections. It also communicates with your bank and allows them to take immediate action against changes in threat.

Can Two Factor Authentication and Tokens Protect You?

Two Factor Authentication is ineffective because malware can easily take over already authenticated sessions. Transaction can then be injected into these sessions or changed to a different recipient or amount, if already being executed. Two Factor Authentication is effective against phishing attacks.

Tokens and other devices are ineffective because they can easily be bypassed. Malware can use such devices to generate passwords of their own, steal generated passwords and then access the session or enter already authenticated sessions.

Trusted by Hundreds of Banks and Tens of Millions of Customers

Trusteer protects hundreds of millions of online banking sessions around the world. Gartner recently placed Trusteer as “Visionary” in their Magic Quadrant for Web Fraud Detection. Other awards include OTA’s Excellence in Consumer Protection, Red Herring 100, SC Magazine’s Best Secure Transaction Solution and Fraud Prevention Product of the Year by Frost and Sullivan are some of the awards that Trusteer has won.

Easy to Use

Downloadable in seconds, Trusteer Rapport is desktop software that works in the background and doesn’t call for a change in user behavior – you can bank and use the internet as usual.

Benefits:

- Prevents wire and ACH fraud
- Provides alerts to prevent phishing
- Downloadable in seconds
- Proven technology
- Added security with no change in user behavior
- Provided at no cost by your bank
- Proactive rather than reactive to threats and incidents
